**Johns Hopkins Selects iMDsoft's MetaVision as its Perioperative Platform**

**Boston, MA – October 21, 2008** - Johns Hopkins - rated by U.S. News & World Report as the nation's number one hospital for the 18<sup>th</sup> consecutive year - executed a comprehensive agreement with **iMDsoft** to implement MetaVision Anesthesia Information Management System (AIMS) across its entire perioperative continuum.

The hospital will initially deploy **iMDsoft**'s MetaVision AIMS in two hundred and fifty ORs, PACU beds, and preop locations in its main campus. Subsequent rollout at Johns Hopkins Bayview facility is planned for the future.

“MetaVision’s state of the art technology will improve our charting and prompting of individual care events and create a digital database to enhance clinical research, education, and quality improvements for core metrics in perioperative medicine” stated Dr. John Ulatowski, Johns Hopkins Chair in Anesthesiology and Critical Care Medicine.

MetaVision clinical information systems are successfully implemented in leading medical centers worldwide, and feature tools for data collection, presentation, decision support, analysis, and order management across local and remote ICUs and perioperative environments.

“We appreciate and share Johns Hopkins’s uncompromising commitment to excellence and trust that together we will further enhance the quality of patient care and provide better clinical and research tools to the Hospital’s exceptional care providers” said Phyllis Gotlib, CEO of **iMDsoft**. She added that “we will also leverage our system to streamline administrative processes and compliance in order to reduce cost and improve patient outcomes.”

**About Johns Hopkins Medicine**

The mission of Johns Hopkins Medicine is to improve the health of the community and the world by setting the standard of excellence in medical education, research and clinical care. Diverse and inclusive, Johns Hopkins Medicine educates medical students, scientists, health care professionals and the public; conducts biomedical research; and provides patient-centered medicine to prevent, diagnose and treat human illness.
