***iMDsoft* Unveils MetaVision Suite 2009**

New suite features innovations in cross-unit dataflow, fluid and medication management, system customization, and interoperability.

Needham, MA, USA – March 5, 2009 *iMDsoft*, a global leader in clinical information systems for acute and general care, today unveiled **MetaVision Suite 2009**, the latest version of the company's flagship clinical information system. MetaVision empowers healthcare professionals by automating workflow and documentation across hospitals' continuum of care. A high-performance, scalable, interoperable solution, it improves patient safety, saves time, provides decision support, and reduces errors while promoting regulatory compliance and improving financial returns.

MetaVision Suite 2009 includes significant new functionality in the areas of cross-unit dataflow, fluid and medication planning, customization management, and interoperability, helping hospitals to provide the best possible care for their patients.

MetaVision Suite 2009's key innovations include:

- *A single continuous patient record across multiple units* – enables clinical teams to view the entire patient data set – vital signs, fluid balances, allergies, lab results, notes, discharge summaries, medication administration, and admission information and more – in one continuous flowsheet. Benefits include better continuity of care and enhanced cross-unit collaboration.
- *Powerful fluid and medication plan management tools* – including an intake calculator to assess the impact of a treatment plan on a patient prior to its implementation and intuitive tools that provide a familiar and convenient way for clinicians to manage patient treatment plans.
- *Summary view* – an advanced display capability that allows clinicians to see a complete, chronologically-ordered trail of progress notes and other reports, such as adverse events, radiology, pathology, and endoscopy, automatically collected from hospital IT systems and conveniently displayed in one place.
- *Easy customization management* – using a distribution tool that allows hospital personnel to perform system customization in a single, central location and to propagate the changes broadly. This is especially useful in multi-site hospitals and makes adapting to changing practice environments faster and easier.
- *Advanced interoperability* – sophisticated wizard and GUI-based interface tools help hospital IT personnel rapidly integrate MetaVision with hospital information systems (HIS).

"**MetaVision Suite** 2009 is exciting because we've made such substantial advances in many areas simultaneously," said Ethan Gershon, M.D., Corporate Director of Clinical Programs, *iMDsoft*. "We have made data more easily available to a greater number of healthcare professionals. Treatment plan management has been simplified to record intuitively the decisions physicians make everyday. Managing the system is easier and more efficient, so hospitals can spend their precious resources on realizing the true benefits of MetaVision in their acute and general care environments, rather than on system administration."

"I'm most excited about the intake calculator. Customers have shared with us that they find predicting nutrition and electrolyte intake to be tedious and error-prone. **MetaVision Suite** 2009 not only eliminates these concerns, but enables an entirely new approach to the problem, where each element of the plan can be adjusted or re-adjusted based on immediate feedback from the calculator until the plan is configured to achieve the appropriate intake for the patient. It's a powerful tool for clinicians."

About MetaVision

iMDsoft's **MetaVision Suite** of clinical information systems for acute and general care environments assists clinicians by automating workflow and documentation. It features fully-integrated tools for data collection, presentation, and order management across the continuum care. Supported by powerful decision support and analysis tools, it promotes patient safety and enhances quality initiatives, cost containment, revenue capture, research, and compliance.

About iMDsoft

iMDsoft is a leading provider of Clinical Information Systems (CIS) for acute and general care. The company's flagship family of solutions, the **MetaVision Suite**, was first implemented in 1999. It has since become a market leader, with implementations in a wide range of ICUs, ORs, and, recently, general wards. Major medical centers across the US, Europe, and Asia use *iMDsoft* technology to improve care quality, promote patient safety, enhance financial performance, support research and compliance, and achieve sustainable market leadership.
