First *iMDsoft* deployment in Denmark

Gentofte University Hospital chooses MetaVision for its ICU

Leiden, The Netherlands – March 22, 2010 – *iMDsoft*[®], a global leader in hospital-wide clinical information systems, has been selected by Gentofte University Hospital, Hellerup, Denmark, to deploy MetaVision[®] in its newly-built, state-of-the-art, ICU. The hospital's department for invasive cardiology is Denmark's second largest, and many of its patients are treated in the ICU. Medidane, *iMDsoft*'s distributor in Denmark, was instrumental in achieving this agreement, which marks *iMDsoft*'s first deployment in that country. MetaVision will replace Philips CareVue clinical information system.

Leading medical centers around the world use the MetaVision suite of clinical information systems to capture, document, analyze, report and store the vast amount of patient-related data generated in critical care, perioperative, and acute care environments. The system has been shown to significantly improve patient safety, quality measures, and financial performance.

"We are convinced that implementing MetaVision is a significant step towards realizing our aim of improving patient care and healthcare logistics at Gentofte University Hospital," said Thomas Mohr, MD, PhD, head of the ICU. "Among the things that particularly attracted us to MetaVision was the enhanced decision support options it offers when compared with the system we previously used. MetaVision provides far more complete adaptability to our particular clinical and administrative needs."

"We are delighted to make our debut in Denmark with an implementation of MetaVision in Gentofte's new ICU," said Phyllis Gotlib, CEO of *iMDsoft*. "I am confident that Gentofte's clinicians will be the first among many health professionals throughout Denmark who will come to enjoy the benefits that MetaVision is already bringing to hundreds of hospitals worldwide."

About iMDsoft

iMDsoft is a leading provider of Clinical Information Systems (CIS) for critical care and the perioperative environment. The company's flagship family of solutions, the MetaVision Suite, was first implemented in 1999. It has since become a market leader, with implementations in a wide range of ICUs and ORs. Major medical centers across the US, Europe, and Asia use *iMDsoft* technology to improve care quality, promote patient safety, enhance financial performance, support research and compliance, and achieve sustainable market leadership. About Gentofte University Hospital

Copenhagen University Hospital Gentofte is part of the Danish public health service. Located north of Copenhagen, the hospital, generally referred to as 'Gentofte Hospital', is placed in the centre of the capital region's health care sector. Residents of the hospital's catchment area receive treatment and care as day patients or in-patients. The hospital liaises closely with local GPs and specialists, as well as local authorities, to ensure safe and consistent on-going care. Gentofte Hospital runs highly specialized units with expertise in cardiology, pulmonary medicine, dermatology and allergology, and [otology, rhinology, and laryngology](#). These units also receive patients referred from other hospitals for specialist treatment. The hospital runs a centre for planned surgery, which offers the most modern and internationally acknowledged surgical methods and highly efficient patient flows.
